Help Us Petition the Delaware River Basin Commission to Exert Jurisdiction over the PennEast Pipeline Project

**DRBC is the Only Agency With the Authority to Look at the Full Length of the Project as it Passes Through our Delaware River Watershed.**

The PennEast Pipeline Project could cut a 100-foot wide right-of-way for over 108 miles approximately 87% of which will be within the boundaries of the Delaware River watershed. The pipeline will cross approximately 33 wetland complexes and 60 waterways, including the Delaware River and the Lehigh River. Also targeted are forests as well as public and private lands. The Delaware River Basin Commission (DRBC) is the only agency with the legal authority to look at the cumulative impacts of the entire project as it cuts through the watershed, including passing from one state into another, and including how the harms of this project will be magnified by the impacts of other recent and proposed pipeline projects.

Support the petition submitted by the Delaware Riverkeeper Network on September 9 with a petition of your own.

Commissioners
Delaware River Basin Commission
P.O. Box 7360
West Trenton, New Jersey 08628

Dear Commissioners,

I hereby petition the Delaware River Basin Commission (Commission), pursuant to its authority and obligations under Section 3.8 of the Delaware River Basin Compact (Compact), to exercise its jurisdiction under the Compact and the current Rules of Practice and Procedure (RPP) over the PennEast Pipeline Project. The PennEast Project is a green fields pipeline project that could result in the cutting of a 100 foot wide right-of-way for over 108 miles, approximately 87% of which are within the boundaries of the Delaware River watershed. The pipeline will cross approximately 33 wetland complexes and 60 waterways, including the Delaware and Lehigh Rivers. Also targeted are forests as well as public and private lands. With a project of this magnitude, there is little doubt that the PennEast Pipeline will involve a significant disturbance of ground cover affecting water resources of the basin thereby triggering DRBC review.

In addition, the project passes through reaches of the Delaware River and watershed designated as Special Protection Waters, and the project will cut through at least 5 DRBC Comprehensive Plan areas, providing additional authority for DRBC review.

Respectfully,

Name:
